

MedSelect Release Upgrade Instructions

Upgrading AWS, Centrack and Control Center

(Updated for upgrade to Impromptu 7.5: 10/04/2011)

1. FTP the Setup Files from the Server

The server must be upgraded before beginning client upgrades and installations.

1. From the Windows Task Bar, select **Start**
2. Select **R**un...
3. On the command line, type **ftp medsvr** then press Enter
4. A DOS window will open and you will be prompted as follows. Type the responses as shown:

User (medsvr: (none)): **oraadmin**

Password required for oraadmin.

Password: **password** (where password = oraadmin password for your server)

5. You will see the following:

User oraadmin logged in.

ftp>

6. At the prompt, enter the following command:

ftp> **cd c:\temp** and press **Enter**

You will see the message: Local directory now c:\temp

7. At the prompt, enter the following command:

ftp> **bin**

You will see the message: "Type set to I".

8. At the prompt, enter the following commands:

For **AWS**

ftp> **get /db/diskettes/aws/awssetup.exe**

ftp> **get /db/diskettes/examrx/examrxsetup.exe**

MedSelect Release Upgrade Instructions

For **Centrack**

ftp> **get /db/diskettes/centrack/centracksetup.exe**

ftp> **get /db/diskettes/examct/examctsetup.exe**

For **Control Center**

ftp> **get /db/diskettes/cc/ccsetup.exe**

ftp> **get /db/diskettes/examssp/examsspsetup.exe**

For **New Installs** or **Paid Upgrades** to Impromptu 7.5.0

ftp> **get /db/diskettes/impromptu/impromptusetup.exe**

Exit FTP as follows:

ftp> **quit**

The DOS window will close automatically.

2. Upgrading the AWS

1. From the Windows Task Bar, select **Start**
2. Select **R**un...
3. Using the **Browse** button, go to the **Temp** directory and choose:

c:\temp\awssetup.exe then click **OK**

The AWS setup program will now be executing.

4. Click on the **OK** button when requested to start the installation.
5. Select **Typical Installation** if you are installing on the C: drive, or select **Custom Installation** to install on the D: drive, then click on the **OK** button.
6. When asked, "What type of Oracle database will you connect to?" choose **Oracle via SQLnet** then click on the **OK** button.
7. If asked, choose to restart the computer.

Note: When running the AWS for the first time, a DOS window may appear minimized in the task bar. Close this window.

MedSelect Release Upgrade Instructions

3. Upgrading Centrack

1. From the Windows Task Bar, select **Start**
2. Select **R**un...
3. Using the **Browse** button, go to the **Temp** directory and choose:
c:\temp\centracksetup.exe then click **OK**

The Centrack setup program will now be executing.
4. Click on the **OK** button when requested to start the installation.
5. Select **Typical Installation** if you are installing on the C: drive, or select **Custom Installation** to install on the D: drive, then click on the **OK** button.
6. When asked, "What type of Oracle database will you connect to?" choose **Oracle via SQLnet** then click on the **OK** button.
7. If asked, choose to restart the computer.

Note: When running the AWS for the first time, a DOS window may appear minimized in the task bar. Close this window.

4. Upgrading Control Center

1. From the Windows Task Bar, select **Start**
2. Select **R**un...
3. Using the **Browse** button, go to the **Temp** directory and choose:
c:\temp\ccsetup.exe then click **OK**

The Control Center setup program will now be executing.
4. Click on the **OK** button when requested to start the installation.
5. Select **Typical Installation** if you are installing on the C: drive, or select **Custom Installation** to install on the D: drive, then click on the **OK** button.
6. When asked, "What type of Oracle database will you connect to?" choose **Oracle via SQLnet** then click on the **OK** button.
7. If asked, choose to restart the computer.

Note: When running the Control Center for the first time, a DOS window may appear minimized in the task bar. Close this window.

5. Windows XP and Windows 7- Installing Impromptu 7.5.0

This is for NEW Installs, and paid upgrades

If the current application of Scheduler is running, close the application before beginning this installation.

1. Log in as the **Administrator**
2. Disable Virus Scan Software for Better Performance.
3. Before you install Impromptu 7.5.0, ensure that the computer meets the minimum system requirements.
 - a. Operating System: Windows XP or Windows 7
 - b. Memory: 512 MB
 - c. Processor: Pentium III 300 MHz or faster
 - d. Disk Space: 225 MB (plus 150 MB free space for installation)
4. If this is an upgrade from Impromptu 7.1.339.0, remove all custom reports that are located in the **\Program Files\Cognos\Cer3** directory or subdirectory of **\Program Files\Cognos\Cer3**
5. Close all programs that are currently running.
6. From the Windows Task Bar, select **Start**
7. Select **Run...**
8. Using the **Browse** button, go to the **Temp** directory and choose:

c:\temp\impromptusetup.exe then click **OK**

9. Impromptu 7.5.0 installation is complete

6. Upgrading Examiner (Rx, Centrack or SupplySource)

If the current application of Scheduler is running, close the application before beginning this installation.

1. **Log on** as Examiner
2. From the Windows Task Bar, select **Start**
3. Select **Run...**
4. Using the **Browse** button, go to the **Temp** directory and choose:

For **AWS**

c:\temp\examrxsetup.exe then click **OK**

For **Centrack**

c:\temp\examctsetup.exe then click **OK**

For **Control Center (SupplySource)**

c:\temp\examsspsetup.exe then click **OK**

5. Click on the **OK** button when requested to start the installation.
6. Select the appropriate operating system, click **OK**
7. Click on the **OK** button if there are no custom reports in the Cer6 directory or subdirectories.
8. **Restart** the computer
9. **Log on** as Examiner
10. Scheduler should automatically start
11. To run Scheduler in the Taskbar Tray:

From Scheduler, Click **Tools**, then **Options**

Click on the **Mode** tab

Check box, Run in Taskbar Tray, click **OK**
12. To upgrade custom reports from 7.1.339.0 to 7.5.0: when they are opened for the first time, click on the option “upgrade this report” in the Report Upgrade dialog box. Save.

MedSelect Release Upgrade Instructions

13. To set Impromptu to a single instance, use the following command at the run prompt:

"c:\program files\cognos\cer6\bin\impuser.exe" /si

14. If Scheduler started with no errors, enable your Virus Scan software

7. Delete .exe Files

1. In Windows Explorer, open the **c:\temp** directory
2. Delete these files:

awssetup.exe

examrxsetup.exe

impromptusetup.exe Or

centracksetup.exe

examctsetup.exe

impromptusetup.exe Or

ccsetup.exe

examsspsetup.exe

impromptusetup.exe

8. Delete Directory

Do not delete this directory until you have confirmed that Scheduler is running.

1. Delete this directory to free up disk space:

c:\Cognos BI
